Comparison Microscope

T-1922

The Comparison Microscope by Ken-A-Vision is the perfect classroom tool for teaching forensics or any comparative science. It allows side-by-side comparisons of two slides as well as the ability to view each slide individually. The high-quality optics, precision mechanics and cool operation provide a safe and flexible value.

Additional Features and Benefits

- Side-by-side comparisons of “evidence”
- Each microscope focuses independently
- Object or microscope slide on each side can be viewed in a full field independently OR together in a split screen
- Stage manipulators optionally available
